

A close-up photograph of a human hand, palm up, holding a large quantity of small, clear, translucent plastic pellets. The pellets are piled in the center of the palm and spill slightly over the edges. The background is a textured, light blue-grey surface that appears to be crumpled paper or fabric. The lighting is soft, highlighting the texture of the skin and the individual pellets.

Introduction

This Resource and Waste Management Policy outlines Casadevall Group's commitment to minimizing waste generation and promoting responsible resource use across all our operations.

Its purpose is to provide clear guidance on how sustainable resources and waste management as well as recycling principles are embedded throughout our business activities, including sourcing, design, production, and packaging. The policy underscores our dedication to operating with environmental awareness, fostering circularity, and continuously reducing resource consumption.

Casadevall Group adheres to all applicable national and local laws and regulations concerning waste management and environmental protection. This policy complements those legal obligations and serves as a reference to ensure consistent understanding of best practices.

Scope

This policy applies to all employees, contractors, suppliers, and partners involved in Casadevall Group's operations. It covers all activities related to waste generation, handling, and recycling across our facilities, project sites, and offices. Everyone within the organization and its extended network is expected to understand and adhere to the principles outlined in this policy to support our commitment to responsible waste management and environmental sustainability.

Sustainable resource management

At Casadevall Group, responsible resource use is a foundational element of our sustainability commitment. We recognize that the resources we bring into our operations have significant environmental impacts, from extraction to processing. To minimize these impacts, we prioritize strategies that reduce reliance on virgin resources and promote the use of more sustainable alternatives. This approach not only supports environmental stewardship but also enhances resource resilience.

Whether our products are being produced in Europe, Asia, or North America, Casadevall Group's global network of production facilities each maintain the same quality standard to ensure that our client's brand image is delivered consistently everywhere in the world.

Use of recycled resources

Casadevall Group actively strives to maximize the use of recycled resources across our supply chain. By integrating recycled content, like recycled PET and PU, into our products and packaging, we reduce dependence on finite virgin resources and decrease the environmental footprint associated with resource extraction and processing. We work closely with suppliers to source high-quality recycled materials that meet performance standards.

Use of other more sustainable resources

Beyond recycled content, Casadevall Group is committed to adopting alternative sustainable materials that offer reduced environmental impacts. This includes sourcing renewable, responsibly certified, or bio-based materials. We emphasize materials engineered for durability and recyclability, ensuring extended product life cycles and enabling effective reintegration into circular systems.

Waste management

Casadevall Group seeks to promote responsible waste management as an important aspect of our sustainability efforts. Acknowledging that waste generation can affect both environmental and operational performance, we aim to reduce waste production across our offices and factories where feasible.

Our approach includes considering optimized product and process design to help minimize material use and waste generation from the outset. We encourage the implementation of waste sorting practices to facilitate appropriate separation and recycling of materials whenever possible, with the goal of diverting waste from landfill and lessening our environmental impact.

Hazardous waste

Casadevall Group is committed to minimizing the generation of hazardous waste and managing any that is produced in a responsible and compliant manner. We prioritize identifying, segregating, and handling hazardous waste carefully to reduce risks to both health and the environment. Whenever possible, we focus on reducing hazardous waste at the source and collaborate with qualified partners to ensure its safe treatment and disposal in accordance with applicable regulations and best practices.

Non-hazardous waste

Efforts are made to manage non-hazardous waste through waste reduction, segregation, and recycling initiatives across our offices and factories. We promote effective sorting and recovery of non-hazardous materials, including paper, plastics, and metals, to maximize resource efficiency and minimize environmental impact.

Policy revisions and governance

The policy will be reviewed and updated periodically to remain aligned with evolving knowledge on waste management and recycling practices and regulatory frameworks. Questions or requests for clarification can be directed to the owner of this policy.

Public policies
